

AIRINOV FIRST

With AIRINOV First, you can take your first steps in precision agriculture using a drone; each plot is unique and houses a large variety of differences.

The introductory offer of AIRINOV First enables you to easily process data using Parrot Sequoia. Parrot's technology is easy to use, which is why you don't need to worry about being a seasoned drone pilot or an I.T expert. Your subscription allows you to benefit from free processing credits.

In only 3 steps AIRINOV First provides an assessment of your crops and vegetation.

You don't need any specific technical skills to process the data. Not only can you automatically obtain high-resolution NDVI maps of the area the drone flew over, but you can also have a PDF report of the results.

Every time you send data, you receive an NDVI map (resolution 1m/pix):

There's an absolute color scale and an adjusted color scale that highlights the differences in the crops and vegetation. Using 'smart zoning' you can intuitively understand the results.

AIRINOV First is accessible to all Parrot Sequoia users (up to 10 ha⁽¹⁾ of free processing per day):

[use the coupon in your SEQUOIA box to access the service](#)

With AIRINOV First+ you can analyze further! AIRINOV First+ lets you map up to 150ha⁽¹⁾ free per week.

Included free with Parrot Disco-Pro Ag and Parrot Bluegrass, AIRINOV First+ increases your capacity, so you can fly all year round:

[access the service by connecting to parrot.airinov.com](http://www.parrot.airinov.com)

⁽¹⁾ Depending on the flight altitude and the recovery rate. AIRINOV First+ includes a maximum of 1400 credits.

For more details about the credits included in AIRINOV First and AIRINOV First+, contact AIRINOV team on www.airinov.fr/en/contact
